### **FOR IMMEDIATE RELEASE**

## **EBE and GLCS Integrate EBE's Enterprise Mobile Capture and GLCS Channel Solutions**

EAST MOLINE, IL April 13, 2022 — Through this integration, drivers receive both automated and ad-hoc messages created by dispatchers or billers through EBE's Document Auditor module. The messages can be displayed in near real-time on a driver's mobile communications device, eliminating the need for the driver to work within two applications. The messages are still available in EBE's Mobile Messaging Center and provided in roll-up reports.

"The ability to provide mobile capture alerts to drivers on their Samsara device has greatly improved the driver experience. Without leaving their primary device, drivers will know which documents are missing or late. In addition, the process has minimized the 'paper chase' task performed by the operations team, which has had a positive impact across the board."

-- Jess Siemers, General Manager of Wayne Transports, Inc.

"The integration with GLCS is the continuation of EBE's commitment to invest in the driver experience through our ELD integration API. Through the API, leading ELD providers can seamlessly utilize EBE's mobile capture and messaging as part of their workflow process. As GLCS continues to gain market share in the TMS interface market, the integration between our solutions was a natural step."

-- Larry Kerr, President of EBE Technologies.

“Seamless automation of driver workflow to include image capture with communication to and from the back office is a natural progression. This new integration takes us beyond how we typically see multiple solutions interact in this scenario a fast and lean package. This will eliminate wasteful time and streamline your image capture process.

-- Nate Johnson, President of GLCS, Inc.
